

# oops, an object oriented practical scribe’s package.\*

Erwann Rogard<sup>†</sup>

Released 2020/04/10

## Abstract

`oops` is a package for L<sup>A</sup>T<sub>E</sub>X (hence “scribe”) for generating macro definitions as the need arises in the document, and to organize them along two dimensions: functions and objects, hence “OO”. This is done using a minimalist interface built upon `xparse`[4]. Specifically, `\Ops<object>` begins a series of instructions alternating between ‘text’ and definitions, that themselves optionally expand using predefined or inline rules. For example,

```
\Ops<Math>[Let~]{Space=\Omega}*[~denote the sample space]{}
```

expands to: “Let  $\Omega$  denote the sample space”. As a side effect, `\Space<Math>` encodes “ $\Omega$ ”. `Math` being the default for `<object>`, it can be dropped. Optionally, the definitions can be written to a file, and restored, which can be useful for typesetting documents sharing the same notational conventions. Altogether, “practical”.

# Usage

### Convention

1. Loosely, those of [3] and [4], for example as to the meaning of  $\langle token\ list \rangle$ .
2. If unspecified, the environment in which a function must be declared is `document`.
3. Where  $\langle tl_1 \rangle$  is an optional argument, its default is `Math`.

---

<code>\usepackage</code>	<code>\usepackage{oops}</code>
--------------------------	--------------------------------

---

**Environment** *preamble*

**Requirement** `oops.sty` is in the path of the L<sup>A</sup>T<sub>E</sub>X engine. See [Part III, section 5](#).

**\Ops**  $\langle tl_1 \rangle$   
 $[\langle tl_2 \rangle]$   
 $i\{\langle code_1 \rangle\}$   
 $\{\langle kvl_1 \rangle\}$

 $*$   
 $s\{\{\langle tl_3 \rangle\}|\{\langle tl_3 \rangle\}\{\langle tl_4 \rangle\}|\{\langle tl_3 \rangle\}\{\langle tl_4 \rangle\}\{\langle tl_5 \rangle\}\}$   
 $o\{\langle code_2 \rangle\}$   
 $[\langle tl_6 \rangle]$

**Requirement**  $\langle kvl_1 \rangle$  is specified (all others optional).

$\langle tl_1 \rangle$

**Example** Math, ModelA, ModelB

**Semantics** Registers a new object, if applicable

$\langle tl_2 \rangle$

**Example** Let~

**Semantics** Expands  $\langle tl_2 \rangle$

$\langle code_1 \rangle$

**Example**  $\mathbb{\#1}$

**Semantics** 1.  $\langle val_i \rangle \leftarrow \langle code_1 \rangle$  applied to  $\langle val_i \rangle$

**Semantics** 2.  $\langle key_i \rangle \langle tl_1 \rangle \leftarrow \langle val_i \rangle$  defined in step 1, using subsection 6.2 for expansion.

3. If Write= $\text{BooleanTrue}$ , writes the definitions made in step 2 to file  $oops\langle digits \rangle.tex$ , where  $\langle digits \rangle = \text{pdfcreationdate}$

$+$

**Other** Needed to make  $\backslash Ops$ 'side effect within a *local group* persist thereafter

**Semantics** Appends step 2 and step 3 to  $\backslash OpsHook$

$*$

**Semantics** 5. Expands  $\langle code_2 \rangle$  applied to the list created in step 1, using the separator specified by subsection 2.7.1, subsection 2.7.2, subsection 2.7.3.

### 3 Install

Compiling `oops.dtx` (under Unix, `$tex oops.dtx`) will generate `oops.sty` and `oops.pdf`

### 4 Issue

1. **Don't:** `Inner={\####1\}`  
**Symptom:** `\OopsRead` fails  
**Do:** `Inner={\char'####1\char'}`

### 5 Support

This package is available from <https://www.ctan.org/pkg/oops> and <https://github.com/rogard/oops>.

### 6 Testing

It's not possible to check the expansion of a certain class of macros against predefined values[6]. Instead, one can check that Part II, as generated in section 3 on one's own machine, agrees with `bench.pdf` available at <https://github.com/rogard/oops>,
