ccool, a package for encoding mathematical notation*

Erwann Rogard[†]

Released 2020/04/10

Abstract

ccool is a package for LaTeX, for encoding mathematical definitions in macros that retain the meaning thereof (\R rather than $\hat{R}\$), the idea behind cool[2]. However, here, it is entirely up to the user to define these macros, hence the prefix 'c'[ustom]. This is done using a minimalist interface built upon xparse[4]. Specifically, \Ccool< $\langle object \rangle$ > begins a series of instructions alternating between 'text' and definitions, that themselves optionally expand using predefined or inline rules. For example,

\Ccool<Math>[Let~]{Space=\Omega}*[~denote the sample space]{}

expands to: "Let Ω denote the sample space". As a side effect, Ω encodes Ω ". Math being the default for $\langle object \rangle$, it can be dropped. Optionally, the definitions can be written to a file, and restored, which can be useful for typesetting documents sharing the same notational conventions.

Part I

Usage

Convention

- 1. Loosely, those of [3] and [4], for example as to the meaning of $\langle token \ list \rangle$.
- 2. If unspecified, the environment in which a function must be declared is document.
- 3. Where $\langle tl_1 \rangle$ is an optional argument, its default is Math.

Theorem 1 (Mittelwertsatz für n Variable) Es sei $n \in \mathbb{N}$, $D \subseteq \mathbb{N}^n$ eine offene Menge und $f \in C^1(D,\mathbb{R})$. Dann gibt es auf jeder Strecke $[x_0,x] \subset D$ einen $Punkt \ \xi \in [x_0,x]$, so dass gilt

$$\frac{f(x) - f(x_0)}{x - x_0} = \operatorname{grad} f(\xi)^{\top}$$

4 Support

This package is available from https://www.ctan.org/pkg/ccool and https://github.com/rogard/ccool.

5 Testing

It's not possible to check the expansion of a certain class of macros against predefined values[6]. Instead, one can check that Part II, as generated in section 2 on one's own machine, agrees with bench.pdf available at https://github.com/rogard/ccool,
