The ccool package*

Erwann Rogard[†]

Released 2020/04/15

Abstract

ccool stands for Custom COntent Oriented for IATEX, a concept pioneered by $cool[?]^1$. This is done using a minimalist interface built upon xparse[?]. Specifically, $??<\langle name \rangle >$ begins a series of instructions alternating between 'text' and macro definitions, that themselves optionally expand using predefined or inline rules. For example,

expands to: "Let $\mathbb N$ and $\mathbb R$ denote the natural and real numbers." As a side effect, $\mathbb N_{ath}\$ encodes " $\mathbb N$ " (and likewise for $\mathbb R_{al}$). Math being the default for $\mathbb N$ can be dropped. In conjunction with lamba expressions, this tool allows for encoding the way certain mathematical objects, such as functions, should be formatted. Optionally, the macros can be written to a file, and read, which can be useful for typesetting documents sharing the same notation.

Contents

Part I

Usage

Convention

- 1. Loosely, those of [?] and [?], for example as to the meaning of $\langle token \ list \rangle$.
- 2. If unspecified, the environment in which a macro must be declared is document.

\usepackage

\usepackage{ccool}

Requirement

- 1. ccool.sty is in the path of the LATEX engine. See ??, ??.
- 2. Declare it in the preamble

^{*}This file describes version v2.0, last revised 2020/04/15.

[†]firstname dot lastname AusTria gmail dot com

¹Whereas cool provided predefined macros, ccool is tool for making macros, hence "custom".

```
\Ccool
               \cool<\langle tl_1\rangle>
               [\langle t1_2 \rangle]
               i\{\langle code_1 \rangle\}
               \{\langle kvl_1 \rangle\}
               \mathtt{s}\{\{\langle \mathtt{t} 1_3 \rangle\} \,|\, \{\langle \mathtt{t} 1_3 \rangle\} \{\langle \mathtt{t} 1_4 \rangle\} \,|\, \{\langle \mathtt{t} 1_3 \rangle\} \{\langle \mathtt{t} 1_4 \rangle\} \{\langle \mathtt{t} 1_5 \rangle\}\}
               \mathsf{o}\{\langle \mathit{code}_2\rangle\}
               [\langle t1_6 \rangle]
               Requirement \langle kvl_1 \rangle is specified (all others optional).
   \langle tl_1 \rangle
              Default ??
               Example Math, ModelA, ModelB
               Semantics Identifies a group of macros
   \langle tl_2 \rangle

```

%

The CUSUM statistic process and the corresponding one-sided CUSUM stopping time are defined as follows:

Definition 1 . Let $\lambda \in \mathcal{R}$ and $\nu \in \mathcal{R}^+$. Define the following processes:

- 1. $u_t(\lambda) = \lambda \xi_t \frac{1}{2}\lambda^2 t$; $m_t(\lambda) = \inf_{0 \le s \le t} y_s(\lambda)$.
- 2. $y_t(\lambda) = m_t(\lambda) u_t(\lambda) \ge 0$, which is the CUSUM statistic process.
- 3. $T_c(\lambda, m) = \inf[t \ge 0; y_t(\lambda) \ge m]$, which is the CUSUM stopping time.

(Check: λ, y)
