oops, an object oriented practical scribe's package.*

Erwann Rogard[†]

Released 2020/04/10

Abstract

oops is a package for LaTeX (hence "scribe") for generating macro definitions as the need arises in the document, and to organize them along two dimensions: functions and objects, hence "OO". This is done using a minimalist interface built upon xparse[4]. Specifically, Oops < object > begins a series of instructions alternating between 'text' and definitions, that themselves optionally expand using predefined or inline rules. For example,

 $\label{lem:constant} $$ \operatorname{\mathbb{L}et^{-}}{Space=\Omega}*[-denote the sample space]{} $$$

expands to: "Let Ω denote the sample space". As a side effect, Ω encodes Ω ". Math being the default for $\langle object \rangle$, it can be dropped. Optionally, the definitions can be written to a file, and restored, which can be useful for typesetting documents sharing the same notational conventions. Altogether, "practical".

Part I

Usage

Convention

- 1. Loosely, those of [3] and [4], for example as to the meaning of $\langle token \ list \rangle$.
- 2. If unspecified, the environment in which a function must be declared is document.
- 3. Where $\langle \mathit{tl}_1 \rangle$ is an optional argument, its default is Math.

\usepackage

\usepackage{oops}

 ${\bf Environment} \ \ preamble$

Requirement oops.sty is in the path of the LATEX engine. See Part III, section 5.

```
\Oops
             \colon=(t1_1)>
              [\langle t1_2 \rangle]
             i\{\langle code_1 \rangle\}
              \{\langle kvl_1 \rangle\}
             \mathtt{s}\{\{\langle\mathtt{t}1_3\rangle\}|\{\langle\mathtt{t}1_3\rangle\}\{\langle\mathtt{t}1_4\rangle\}|\{\langle\mathtt{t}1_3\rangle\}\{\langle\mathtt{t}1_4\rangle\}\{\langle\mathtt{t}1_5\rangle\}\}
             o\{\langle code_2 \rangle\}
              [\langle t1_6 \rangle]
             Requirement \langle kvl_1 \rangle is specified (all others optional).
   \langle \mathtt{tl}_1 \rangle
             Example Math, ModelA, ModelB
             Semantics Registers a new object, if applicable
   \langle \mathtt{tl}_2 \rangle
             Example Let~
             Semantics Expands \langle tl_2 \rangle
\langle code_1 \rangle
             Example \mathbb{#1}
                                  1. \langle val_i \rangle \leftarrow \langle code_1 \rangle applied to \langle val_i \rangle
              Semantics
 \langle kvl_1 \rangle
             Example Elems={\omega_1, \dots, \omega_n}, Sample=\Omega
                                   2. \langle key_i \rangle \langle (tl_1) \rangle \leftarrow \langle val_i \rangle defined in step 1, using subsection 6.2 for
              Semantics
                             expansion.
                         3. If Write=\BooleanTrue, writes the definitions made in step 2 to file
                             oops\langle digits \rangle.tex, where \langle digits \rangle = \pdfcreationdate
             Other Needed to make \Oops'side effect within a local group persist thereafter
              Semantics Appends step 2 and step 3 to \OopsHook
                                   5. Expands \langle code_2 \rangle applied to the list created in step 1, using the separator
             Semantics
                             specified by subsubsection 2.7.1, subsubsection 2.7.2, subsubsection 2.7.3.
   \langle t1_3 \rangle
             Example {~\in~}
   \langle t1_4 \rangle
```

```
Example {,~}
       \langle t1_5 \rangle
               Example {~\&~}
     \langle code_2 \rangle
               Example $\left\{#1\right\}$
       \langle {\tt tl}_6 \rangle
               Semantics \langle tl_1 \rangle = [\langle tl_6 \rangle]
               \verb|\OopsClear|<| keyval list| >
 \OopsClear
               Semantics Clears any data created by \{\langle tl_1 \rangle\}, for all \langle tl_1 \rangle in \langle keyval \ list \rangle
 \OopsDebug
               Semantics See Part IV
  \OopsHook
               \OopsHook
               Example \AfterEndEnvironment{theorem}{\OopsHook}
               \colon=0
\OopsOption
               Semantics Set default options for section 2
     Expans
               Default xo
               Syntax Either of eo, ee, ex, xe, xo, xe, xx
       File

Part III

Other

1 Acknowledgment

This work has benefited from Q&A's from the I^AT_EXcommunity, see here: https://tex.stackexchange.com/users/112708/erwann?tab=questions. Specific references are made in Part IV. Listing 4 and Listing 5 are from [1]. Listing 7 is from tcolbox[5, 17.3].

2 Also see

1. The package cool[2]

3 Install

Compiling oops.dtx (under Unix, \$tex oops.dtx) will generate oops.sty and oops.pdf

4 Issue

```
1. Don't: Inner={\{####1\}
    Symptom: \OopsRead fails
    Do: Inner={\char'{####1\char'}}
```

5 Support

This package is available from https://www.ctan.org/pkg/oops and https://github.com/rogard/oops.

6 Testing

It's not possible to check the expansion of a certain class of macros against predefined values[6]. Instead, one can check that Part II, as generated in section 3 on one's own machine, agrees with bench.pdf available at https://github.com/rogard/oops,
